Professional Summary

Data Analyst with hands-on experience in Python, SQL, Excel, and Power BI. Skilled in data cleaning, exploratory analysis, visualization, and transforming datasets into actionable business insights. Seeking an entry-level Data Analyst role to apply analytical and problem-solving skills.

Education

Bachelor of Technology in Computer Science and Engineering (Data Science) **Expected 2027**

Sri Venkateswara College of Engineering and Technology

CGPA: 8.08/10

Experience

Data Analytics Intern — Avaintern Pvt. Ltd. May 1, 2026 – June 29, 2026

- Analyzed 6,435+ sales records using Python and Pandas to identify sales trends and business insights.
- Performed SQL-based data analysis and validation to ensure data accuracy and consistency.
- Collaborated with mentors on real-world data analytics projects.

Data Analytics Intern — Apex Planet Software Pvt. Ltd. May 2026

- Performed data preprocessing and exploratory analysis as part of real-world data analytics workflows.
- Supported dashboard development and reporting to present analytical findings effectively.
- Applied practical knowledge of Python, SQL, data cleaning, and analytics concepts to project-based tasks.

Projects

Walmart Sales Analysis & Interactive Power BI Dashboard *Power BI, Python, Pandas*

- Analyzed 6,435 sales records to evaluate store performance, seasonal trends, holiday impact, and key business factors.
- Built an interactive Power BI dashboard with KPIs, slicers, and visualizations for store, date, holiday, and sales analysis.
- Identified Store 20 as the highest-performing store and found higher average weekly sales during holidays.

Retail Sales Forecasting *Python, Pandas, NumPy, Scikit-learn*

- Analyzed 1M+ retail sales records across multiple stores to identify sales patterns and key business drivers.
- Built and evaluated regression models using Scikit-learn to forecast future sales and assess predictive performance.
- Engineered date-based and business features to capture temporal patterns and prepare data for store-level sales prediction.

Customer Segmentation Using K-Means Clustering *Python, Pandas, Scikit-learn*

- Developed an end-to-end K-Means clustering pipeline to segment customers based on purchasing behavior.
- Performed data cleaning and feature engineering, then applied StandardScaler, PCA, and the Elbow Method to identify meaningful clusters.
- Translated customer segments into actionable strategies including loyalty programs, personalized recommendations, discounts, and bundled offers.

Technical Skills

Programming: Python, SQL

Data Analysis: Pandas, NumPy, EDA, Data Cleaning, Feature Engineering

Visualization & BI: Power BI, Power Query, DAX, Excel, Matplotlib

Machine Learning: Scikit-learn, Regression, K-Means Clustering, PCA

Database: MySQL

Data Engineering: ETL, Data Transformation, Data Pipelines, Data Modeling

Tools: GitHub, Jupyter Notebook, Google Sheets

Certifications

- GenAI Powered Data Analytics Job Simulation** – Tata & Forage
- Power BI for Beginners – Simplilearn SkillUp
- SQL Certification – PrepInsta Technologies
- Gen AI and AI – NASSCOM & IBM SkillsBuild
